

## 60's

### Dream

NAL probably started because of the big dreams of one man. The 1960's were about toil and tears — and the building of an outstanding trisonic wind tunnel testing facility.

## 70's

### Consolidation

The 1970's were first about consolidation, and then about diversification. NAL graduated into an outstanding aeronautical laboratory with excellent facilities and even better people.

## 80's

### Initiatives

The 1980's were about initiatives; starting with the championing of the light combat aircraft concept and ending with the resolve to become the major national player in civil aviation.

## 90's

### Involvement

During the 1990's, NAL actively supported every national programme and emerged as the lead player in civil aviation with its HANSA and SARAS projects.
